And further, the Employer by his agents or servants may enter upon and taken possession of the works and all plant, tools scaffoldings, sheds, machinery, steam and other power utensils and materials lying upon the premises or the adjoining lands or roads, and use the same as his own property or may employ the same by means of his own servants and workmen in carrying on and completing the work or by employing any other Contractor or other person or persons to complete the works, and the Contractor shall not in any way interrupt or do any act matter or thing to prevent or hinder such other contractor or other person or persons employed for completing and finishing or using the materials and plant for the works. When the works shall be completed or as soon thereafter as convenient the Bank shall give a notice in writing to the Contractor to remove his surplus materials and plant, and should the Contractor fail to do so within a period of fourteen days after receipt thereof by him, the Employer may sell the same by public auction, and give credit to the Contractor for the net amount realized. The employer shall thereafter ascertain and certify in writing under his hand what of the said plant and materials so taken possessions or by the Employer and the expenses or loss which the Employer shall have been put to in procuring the works to be completed and the amount. If any, owing the Contractor and the amount which shall be so certified shall thereupon be paid by the Employer to the Contractor or by the Contractor to the Employer, as the case may be, and the Certificate of the Bank shall be final and conclusive between the parties.

31. **Termination of Contract by Contractor:** If this payment of the amount payable by the Employer under Certificate of the Bank's Engineer shall be in arrears and unpaid for thirty days after notice in writing requiring payment of the amount as aforesaid shall have been given by the Contractor to the Employer, or if the Employer interferes with or obstructs the issue of any such Certificate, or if the Employer shall repudiate the Contract, or if the works be stopped under the order of the Architect or the Employer or by any injunction or other order of any court of Law, then and in any of the said cases the Contractor shall be in liberty to determine the Contract by notice in writing to the Employer, and he shall be entitled to recover from the Employer, payment for all works executed and for any loss he may sustain upon any plant or materials supplied or purchased or prepared for the purpose or the Contract.

In arriving at the amount of such payment the net rates contained in the Contractor's original Tender shall be followed or where the same may not apply valuation shall be made in accordance with Clause 17 hereof.

executed work to the approximate value named in the Appendix as 'Value of work for Interim Certificate' has been executed in accordance with this Contract, subject, however, to a retention of the percentage of such value named in the Appendix as "Total Retention Money" after which time the installments shall be up to the full value of the work subsequently so executed and fixed in the building. And when the works have been virtually completed, the Contractor shall be paid by the Employer in accordance with the Certificate to be issued by the Bank's Engineers the sum of money named in the Appendix as "installment after Virtual Completion" being a part of the said Total Retention Money. And the Contractor shall be entitled to the payment of the Final Balance in accordance with the final Certificate at the expiration of the period referred to as 'the Defects liability Period' in the Appendix hereto from the date of virtual completion or as soon as after expiration of such period as the works shall have been finally completed and all defects made good according to the true intent and meaning hereof whichever shall last happen provided always or at or after their completion shall not relive the Contractor from his liability under clause 21 and 36 nor relieve the Contractor of his inability in cases of fraud, dishonesty, or fraudulent concealment relating to the works or materials or to any matter dealt with in the Certificate and in case of the all defects and insufficiencies in the works or materials which a reasonable examination would not have disclosed.

Technical Specifications / Bank's Requirements

Brief Outline

The Reserve Bank of India (RBI) processes massive volumes of circulating currency notes through high-speed Currency Verification and Processing Systems (CVPS). Banknotes accumulate heavy loads of atmospheric dust, skin cells, cellulose fibres, and chemical residue over their lifecycle.

When fed into a CVPS at high velocities, this residue turns into highly airborne fine dust, which risks threatening the respiratory health of bank operators and note-handlers and toxic for environment.

This technical specification details the design, manufacturing, supply, installation, testing, and commissioning of a **Centralised Dust Extraction System (CDES)**. The system will capture dust right at the generation pockets of multiple CVPS machines, conveying it through a sealed network to a centralized filtration unit situated away from the primary processing floor.

The dust extraction system shall be designed, installed, tested and commissioned so as to maintain the particulate matter (PM) concentration within the CVPS room within the permissible limits prescribed by the applicable State Pollution Control Board/Central Pollution Control Board norms and other relevant statutory requirement.

Design Criteria.

There are 02 nos. CVPS machines are placed in an enclosed Air. This floating dust is to be captured and filtered, providing a clean dust-free controlled environment in the CVPS room.

For each CVPS machine, there is an opening on the top (front where the operator feeds the used currency notes) where the dust is generated. A suction hood is to be placed near each machine using a self-balance detachable dust extraction arm. The dust extractor arm approx. 2 meters reach will be supported from the floor mount grout able and detachable pipe stand approx. 3 feet. The suction hood at the end of the arm should be movable easily by hand.

The suction hood shall extract the dust and send it to main dust extraction system (placed on the ground floor near to rear gate) through metallic pipes/ducts of suitable size. The dust particles from this air are extracted from the dusty air when it passes through the filter media. Thereafter, the cleaned air is returned into the room and trapped dust particles are cleaned from filter media by a separate system.

Required features-

- Parts: Prefilter, filter media (electrostatic module/ Filter bag/ cartridge filters/molecular filters, HEPA, MERV or combination to achieve desired indoor air quality standard), post filters, silencer, extractor arms, flexi hose, ducting ,control panel etc.
- Filter efficiency- 90%to 98% air borne particles (size less than or equal to at least 5 micron)
- Metallic /PVC pipes/ducts for suction from the room and return of filtered air .
- Provision of returning the cleaned air in the room
- Dampers needs to be provided for suction control.
- VFD drives for speed control of blowers.

- Automatic control panel
- Appropriate filter cleaning mechanism: Automatic/manual with filter choking alarm system/indicator.
- After the filter choking alarm/indication, it should be ensured that the filters are to be cleaned immediately (within 24hours) to make the system work at maximum efficiency.
- Safety features: Fire retardant filter media, emergency stop button, antistatic/carbon impregnated filter bags(for prefilter), HEPA filter, safety alarms for abnormal conditions, safety alarm for filter replacement/filter choking
- Antistatic lining (applicable for metallic pipes/ducts) in the ducts to prevent friction of charged dust particles.
- Required efficiency in the room- more than 95% i.e. more than 95% of fine dust of the room should be extracted and desired indoor air quality standard to be maintained as per CPCB norms.
- Automatic restart (after power interruption) Voltmeter, Amp meter, hour meter, energy meter
- Noise level: 80 DB +/- 2 DB

Important Note:

- (i) Intending tenderers are advised to visit the site to assess the exact requirement including measurements of various items. (CVPS location is at 2nd floor of the Main Office Building) , Dust extraction System is to be placed at ground floor near 2nd Gate)
- (ii) The successful firm/contractor, immediately on award of work shall prepare the schematic layout/drawing with the proposed arrangement as per Bank's requirement and the layout/drawing is to be approved by the Bank. Tenderers are advised to consider this and quote accordingly.

Electrical Infrastructure & Control Panel (CPWD Electrical Norms).

Blower Fan & Drive: High-efficiency, non-overloading, backwards-curved industrial centrifugal fan dynamically & Driven by a 415V (+/- 10%), 50Hz, 3-Phase, Totally Enclosed Fan Cooled (TEFC) IE3/IE4 Energy Efficient Induction Motor conforming to IS 12615 : 2018. The motor must feature IP55 protection and flameproof certification suited for handling organic, combustible paper dust.

Cubicle Control Panel: The central electrical desk must be compartmentalized, dust and vermin-proof, fabricated from 2.0 mm thick Cold Rolled Close Annealed (CRCA) sheet steel, finished with thermosetting polyurethane powder paint in Siemens Gray (RAL 7032) providing IP54 insulation protection. Switchgear units (MCCBs, MCBs, contactors) must possess a minimum short-circuit breaking capacity of 35 kA.

Earthing Grid: Dual distinct earthing terminals must run along the panel, fan-motor assembly, and structural collectors, terminated into the primary site earthing grid via 25 mm x 3 mm copper or GI earthing strips conforming to IS 3043.

Vibration Isolation & Noise Control: To eliminate physical sound and vibrational transmission through the building, the fan-motor cluster must be seated on a structural common MS base frame isolated via calibrated spring or neoprene vibration isolators exhibiting a minimum isolation efficiency of 90%.

If any accessories, parts, which are not mentioned above but are required to complete the work, are in the scope of the tenderer.

The work shall be completed by fulfilling all the statutory guidelines, IS rule , national electrical code and statutory pollution norms .

Pre-Dispatch Inspection (PDI) & tests at factory-(i) Testing facility of equipment shall be made available at factory and same shall be carried out in presence of Bank's Engineer. Dispatch clearance will be given after inspection of material quality and successful performance at factory. Bank should be informed at least 07days in advance in advance for inspection (PDI) at factory

In addition to above, air quality tests will also be carried out at site conditions after running the equipment for a specified time(30 -45 mints) before its final acceptance. It shall be contractor's responsibility to arrange for the necessary equipment's for such testing.
